

STARNET SECURITY: FINDING OUT FIRST.

How a California guard company moved from hearing about problems from its client to seeing them first — with every shift on the record.

COMPANY	ACTIVE SITES	ACTIVE GUARDS	LIVE SINCE
Starnet Security Inc.	7	22	July 2026

BEFORE

The worst way to learn a post is empty is from your client.

Before NetraOps, that phone call was Starnet's early warning system — whichever app a site was on.

WHAT CHANGED

- Guards clock in on post — GPS check and selfie, on their own phones.
- Late or off post, the supervisor gets an alert.
- Every shift is logged: check-ins, activity reports, incidents, hours.
- The client gets reports by email and its own portal, without asking.

THE RECORD SO FAR

Jul 17 – Oct 5, 2026 · pulled from NetraOps

221

shifts on the record

2,392

GPS photo check-ins
by guards on post

1,716

activity & incident
reports filed

62

late or no-show
alerts sent to the
supervisor

"Before NetraOps, I found out about a problem when the client called. Now I know a guard is late or off post before they do, every shift is on the record, and my client gets their reports without asking me. It runs on the phones my guards already carry."
